

Radiance Frameless “LED” Mirrors

Mounting INSTRUCTIONS

1. Determine where you want to hang the mirror on the wall.
2. Measure the distance between the two (2) aluminum brackets (large and small), that are already adhered to the back of your mirror.
3. Take the two (2) loose aluminum brackets with the holes and place them on the wall. Holes on the bottom and ridges to the wall. Then mount them the same spacing distance as you measured on the back of the mirror brackets
4. Large bracket on top. Small bracket on the bottom. Both centered like on the back of the mirror.
5. Secure them with the screws provided or you can use your own as the wall installation can vary and may need additional hardware like wall anchors.
6. Once the brackets are securely fasten to the wall, pick up the mirror and hang it by slotting the brackets over and into each other in downward direction. You will feel it lock into the slots securely.

Electrical INSTRUCTIONS

1. You can use the plug and just plug it into an regular electrical wall socket
2. Or you can cut off the plug and hardwire into an electrical box. We suggest you use a licensed electrician for that.
3. There is a dimmer knob on the bottom of the mirror. Just turn it to dim or brighten
